Answer the following questions (by observations only – not queries).

1. How many orders data is present in the database?
->**10 orders**
2. How many customers are present in the database?
->**7 customers**
3. How many salespeople are present in the database?
->**5 salespeople**
4. On which date order with highest amount is placed?
->**1990-10-04**
5. For which order salesman got maximum commission? Hint: you need to refer data of two tables.
->**3011**
6. Which salesmen are handling more than two customers? Hint: you need to refer data of two tables.
->**No salesman handle more than two orders.**
7. Which city have single customer?
->**Berlin**
8. Which city has multiple salespeople?
->**London**
9. What is name of customer and salesman of the maximum amount order?
->**Customer - Clemens**
Salesman - Peel
10. Study relationship between the tables in sales database.

->The sales database contains three related tables: customers, orders, and salespeople.

The orders table connects customers using cnum and salespeople using snum.

The customers table also contains snum, linking each customer to their salesperson.
